

Action Selection:
 - Store/Recall
 - Context: target/landmark

Learned Feature Values

Aural, visual, and proprioceptive sensory data

Notes

- Saliency implies localization
- Gaze implies 7 DoF: head and eyes
- Locomotion paradigm: go where you are looking
- Reaching paradigm: reach where you are looking
- Recognition implies either
 - segmentation, blob analysis, feature extraction, & classification, or
 - foveated / centre-weighted colour histogram projection
- Affective state: competitive network of three motives:
 - Curiosity / Distraction
 - Exploration
 - Social engagement
- Episodic Memory recall:
 - Current state + Desired state -> sequence of intermediate states
 - Current state -> next state
